SCAE will be present at the Düsseldorf, 24th to 31st October 2007

With this informative sheet we would like to confirm you that we will be attending the next Fair K2007 at Düsseldorf in the **Hall 3- booth 3C53** and we will expose the following bagmakers:

- 1- Wickett bagmaker model Silver 471, width 660 mm at high speed with six servomotors for the production of bags for automatic packing; this machine takes in the latest interface technology of the drivers for axle control (servomotors) in bus field with the following advantages:
 - increase of the managing system of the machine, of the production speed and the adjustment of the dwell time which consent to improve at maximum the performance obtaining a high quality product
 - central diagnostics on the control of axles of allarm signal from the drivers and once again, allows easy maintenance
 - the possibility to organize a telediagnosics/remote assistance, being able to arrive to the core of the drivers and modify simultaneously the parameters of adjustment
 - memorize the production recipes that permit fast work changes, reducing highly the waste during machine re-starting
 - Interface of the machine with local net to have the in real time historic memory of the production and machine stops

- 2- Welding machine Dimatic model Silver 101, width 880 mm for side sealing with four servomotors; this machine like the Wickett Silver 471 have the new electronic system with interface in bus field with the above mentioned advantages. The machine exposed will be complete of all the accessories for the production of security bags for money transport, valuable goods, reserved documents, mediacal diagnostics and particularly with accessories for 15mm wide sealing on three sides to fulfill the new demand of security bags for the air transport of liquids (alcohol and perfumes), purchased at the airport duty-free shops. Moreover, this accessories can be used to seal coupled films for the packaging of vacuum-barrier-modified/controlled atmosphere bags.

We inform you also that we have developed a new bagmaker with accessories for the Patch glued reinforced handle application which, for a specific commercial decision, we have preferred not to expose it during the Fair K2007 as we have adopted new solutions that we don't want to reveal as our competitors will be attending this Fair too and after the fair we will have this machine in our site in Florence, available for 30 days for demonstration and tests of the new application.
